THUYA ORIENTALIS (BIOTA) (Chinese A. V.)

Although the seed of the different varieties of Chinese Arbor Vitae is selected with care from trees having the definite characteristics of the variety, on account of the possibility of variation in form, color, etc., we cannot guarantee any definite percentage of them to develop the exact form for which they are named. The Thuya orientalis Aurea is not Berchman's Golden. The seed is supposed to have been collected from trees showing distinct golden foliage. At their present age they show little difference from plain Chinese. The Nana is a new variety for us. We purchased the seed from a reliable dealer, which is supposed to have come from dwarf trees, we do not know what percentage of them come true.
